

Installation Instructions

1. Install MySQL and MySQL server from the official site of MySQL (www.mysql.com).
2. Install Apache2 from the official site of APACHE (httpd.apache.org).
3. Install phpMyAdmin from the official site of phpMyAdmin (www.phpmyadmin.net). When asked for username and password use:
username: "root" & password: ""
4. Search for "localhost/phpmyadmin" to a browser of your choice. Login using the credentials you have entered at the above installation (step 3).
5. After you have logged in, you will see at the top of the page a bar like the one below. Find the option "Import" and click it. Search on your PC for the file `**DDL.sql`. Then click on the "Go".

6. Repeat the process of step 5 but this time use the file `**DDLlogin.sql`.
7. Transfer all the files inside the folder "src" to the following destination:
`"/var/www/html"`

8. You can now visit the site using a browser of your preference. Use the link below:

"localhost/HotelFinder.php"

In order to login as an administrator and get the administrator's privileges you have to use the credentials below:

Username: Administrator

Password: !Admin2018!

The "remind my password" utility sends an email with the password to the default email address below:

admin@email.com

The above utility was not fully implemented since the website was designed on local sever and therefore you cant send an email.

*The "DDL.sql" file creates the main database in which we save all the information needed for the functionality of our website. The relational model of this database is pictured in the file "RM.mwb".

**The "DDLlogin.sql" file creates an additional database in which we save the administrators accounts.
